

“Bloaty Floater” – Oct. 15, 2013

Lee Woodworth explains the “Bloaty Floater,” a converted pool toy, to cadets (left). A bit later he outlined an activity that demonstrates some basics of flight.

Lee Woodworth, a former Pilgrim AEO, current member of Wingbusters Model Aircraft Club, and notorious experimenter, brought in his “Bloaty Floater” and described the process he went through to make it into a radio control plane that flies well. In fact, he made it perform some aerobatics at the end of the night. He also had the cadets experiment with inflatable vinyl toys to make them fly.
