

# Rocketry Academy – September 24

A beautiful day for rocketry and those who participated had a great time. We launched close to two dozen rockets, launching until the rockets were no longer usable. We did all the classwork and the cadets passed the test. They also built a couple rockets using no design but their imaginations. The academy had three goals: Teach some rocketry science (done), follow a slightly modified CAP Model Rocketry program to earn the rocketry badge (accomplished) and have a ton of fun (very successful!).
