

R/C model planes at Wingbusters

Cadet Urzua learns to fly radio-control plane under the watchful eye of Lee Woodworth, former AEO at Pilgrim (left). Cadet Hunt takes a turn (right). Training is facilitated by the use of a “buddy box.” Two controllers are wired together so the trainer can take control should the student run into trouble.

(Left) As darkness closes in, Lee gives cadets a lesson in aerodynamics, power curves, and “easy on the controls.”

Woodworth’s “Gull” takes flight (right), blowing smoke and showing the colors.
